Note: Both observed and forecast discharge/water level data are hourly averages. Observed discharge/water level data are provisional data from the Water Survey of Canada. When missing data are present in the observed data series, methods such as interpolation, extrapolation and referring to rating curves are used to estimate data.

Remark: This station is labeled as "regulated", but the forecast is the natural flow only.

DISCLAIMER: These forecasts are derived from a hydrologic model using observed climate data from Environment and Climate Change Canada (ECCC) and Province of British Columbia, and Numerical Weather Prediction (NWP) GRIB2 data from the Canadian Meteorological Centre (CMC), ECCC. The model and data have limitations, inaccuracies and errors. As such, values given in the above charts should only be treated as estimates, are provided for guidance only, and are subject to change. The actual discharges or water levels observed will be different from the forecasts. Users of this data must accept all responsibility for their use and interpretation.
