UPDATE – North Interior

Flood Watch – Middle Fraser tributaries (NEW), Nazko, West Road

Update - High Streamflow Advisory – Upper Fraser tributaries

ISSUED: 12:00 PM May 2, 2023

The River Forecast Centre is upgrading to or maintaining a Flood Watch for:

- Middle Fraser including plateau areas around Quesnel, Williams Lake, Lhoosk'uz Dene (including Baker Creek, Cottonwood River, San Jose River) and surrounding areas (NEW); and Nazko River and West Road River (MAINTAINED)

The River Forecast Centre is maintaining a High Streamflow Advisory for the North Interior including:

- Upper Fraser including plateau areas around Prince George (including Chilako River, Chuchinka River, Salmon River and surrounding areas)

Weather Synopsis:

Sunny conditions with warm temperatures and high freezing levels are anticipated through this week. On Thursday the ridge of high pressure is forecast to weaken, with an upper low trough approaching B.C. on Friday, bringing precipitation to the region. There is currently uncertainty on the location and severity of potential rainfall late in the week.

River Conditions:

Snowmelt rates have been high over the past several days. In plateau areas at mid-elevation, snowpacks are dwindling, however rivers have not reached their peak flow for the season yet.

With on-going above normal temperatures next week, on-going rises in rivers are expected across the region, with increasing potential for flood hazard in other rivers over the coming days. Precipitation on Friday could lead to additional flood hazard.

Flows on Baker Creek at Quesnel (Water Survey of Canada Gauge 08KE016), Sheridan Creek above McLeese Lake (08MC045), San Jose River above Boreland Creek (08MC040), and Bridge Creek below Deka Creek (08LA027) are all flowing at between a 2-year to 5-year flows. Other rivers are approaching the 2-year flow level.

The public is advised:

Ministry of Forests

River levels are rising or expected to rise rapidly. Being near these riverbanks, creeks and fast-flowing bodies of water is dangerous:

- Stay clear of fast-flowing rivers and potentially unstable riverbanks
- Avoid recreational activities such as fishing, swimming, boating or hiking near high streamflow rivers or streams
- Remember, high streamflow can easily trap strong swimmers, increasing risk of drowning

Understand the risks and get prepared by visiting www.PreparedBC/floods.

Ministry of Forests

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
