High Streamflow Advisory – Central Coast

ISSUED: 2:00 PM June 15, 2022

The River Forecast Centre is **issuing a High Streamflow Advisory** for:

- **Central Coast including the Bella Coola River, Dean River and surrounding tributaries**

On-going snowmelt runoff in the Central Coast is leading to high flows. A low-pressure weather system is expected to move off of the BC coast on Thursday, bringing another period of rain and showers to the region. Rivers are expected to respond to additional runoff from rainfall, with increasing flows on Thursday and Friday. Current forecasting is indicating the potential for flows in the 2-year to 5-year range, however with uncertainty in rainfall amounts during this event, higher flow are possible.

The public is advised to stay clear of the fast-flowing rivers and potentially unstable riverbanks during the high-streamflow period. [Be prepared and know your hazards.](#)

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

Ministry of Forests

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
