UPDATE: Flood Warning – Beatton River (UPGRADE)

High Streamflow Advisory – Peace (MAINTAINED)

Issued: 2:30 PM June 14, 2025

The River Forecast Centre is **upgrading** to a Flood Warning for:

- Beatton River (NEW)

The River Forecast Centre is **maintaining** a High Streamflow Advisory for:

- Peace Region including areas around Hudson's Hope, Chetwynd, Tumbler Ridge, Dawson Creek, Fort St. John and surrounding areas

Weather Synopsis:

A low-pressure system offshore of BC is bringing several days of wrap around precipitation to the interior. Observed rainfall totals since Thursday have been in the 10-35 mm range the Cariboo Mountains, Upper Columbia, Upper Fraser, Kootenays, and areas of the Peace River with amounts in the 60-110 mm range through areas Peace region near Chetwynd, Hudson Hoper and north into the northern Rocky Mountains. Limited additional rainfall is anticipated through the rest of today.

River Conditions:

Rivers through the region have largely reached peak levels from this rainfall event. In the Peace region, flows remain rising and may reach 2-year to 5-year levels. Upstream areas in the Beatton River are near the 50-year return period level and rising. Additional rises are expected along the Beatton River on Saturday afternoon and evening.

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

---

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

# Ministry of Water, Land and Resource Stewardship

A ***Flood Watch*** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A ***Flood Warning*** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
